Washington Dec 11 1

My Dear Dr. Gray

I have sent you by express a package containing some 300 species for the St. Petersburg Bot. Garden. For some reason my specimens have not kept as bright as they should have done and I do not feel satisfied with them at all. But you must be able to get some that will be worth the sending and if I can thus in part repay you many favors I shall be much pleased.

After the delightful and somewhat exciting week at Boston and the night travel homewards I was very much fatigued; this with an accumulation of business will ex-

ever may not return earlier to
thank you and Mrs. Lowe for your
kindness which contributed so much
to my pleasure from you just ending
to the final meeting with the
kind friends who live always in
the lovely shores of the bay of
Suez. I think of it all continually
with the greatest delight.

I have a letter from Lemmon giving some account of his collections in S. E. California. On Walker's Ranch at the headwaters of the Mokelumne river he came upon "acres" of Abies Parryi Libocedrus Decurrens and Cupressus. He sent me nice specimens and seeds of the latter.

With kindest regards to
all at Cambridge and Berkeley.

Yours truly,

J. G. Lemmon
